Effect of Artillery Fire.

The Historic Struggle at Verdun.

The bois Fumin and the cote de Souville near Verdun. The trenches are flattened out by the terrific bombardment.

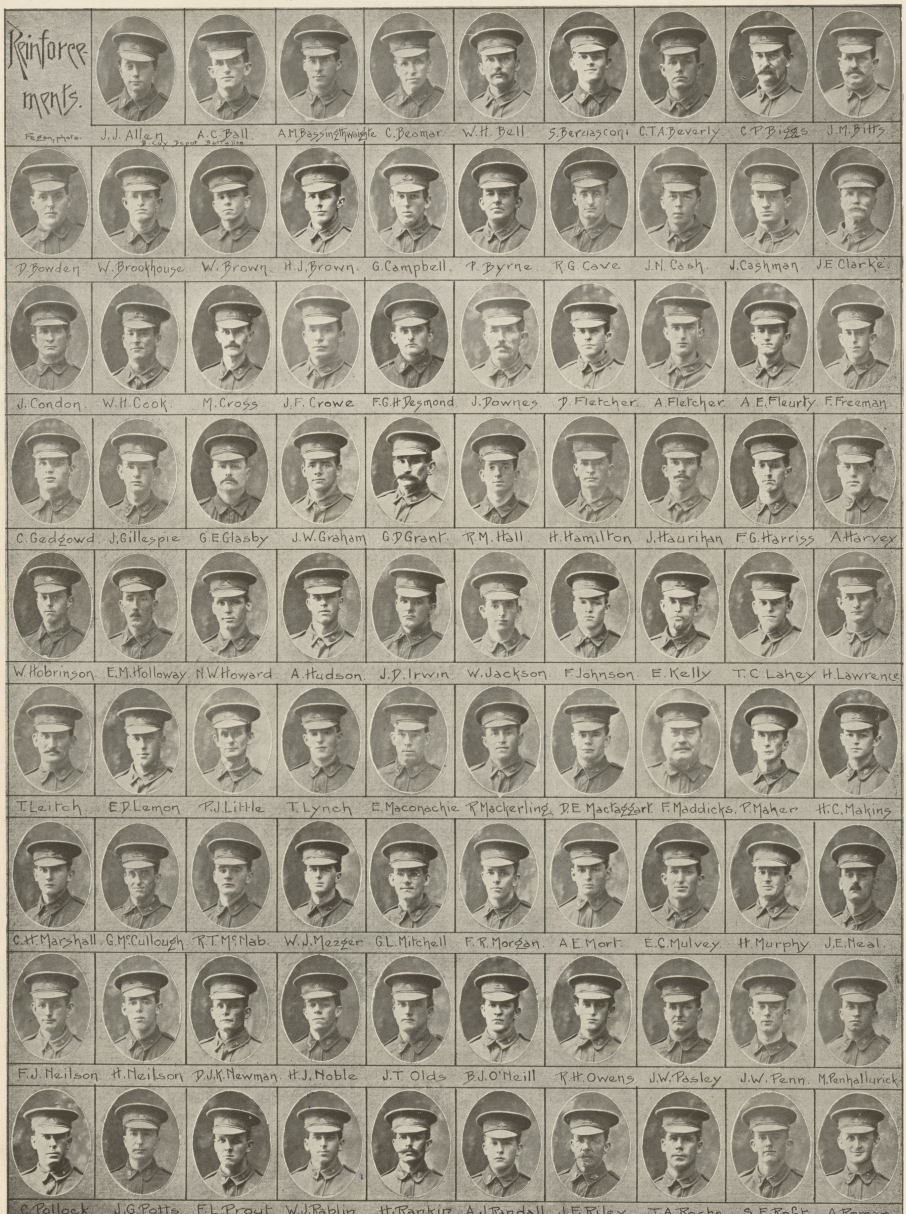

On the Somme

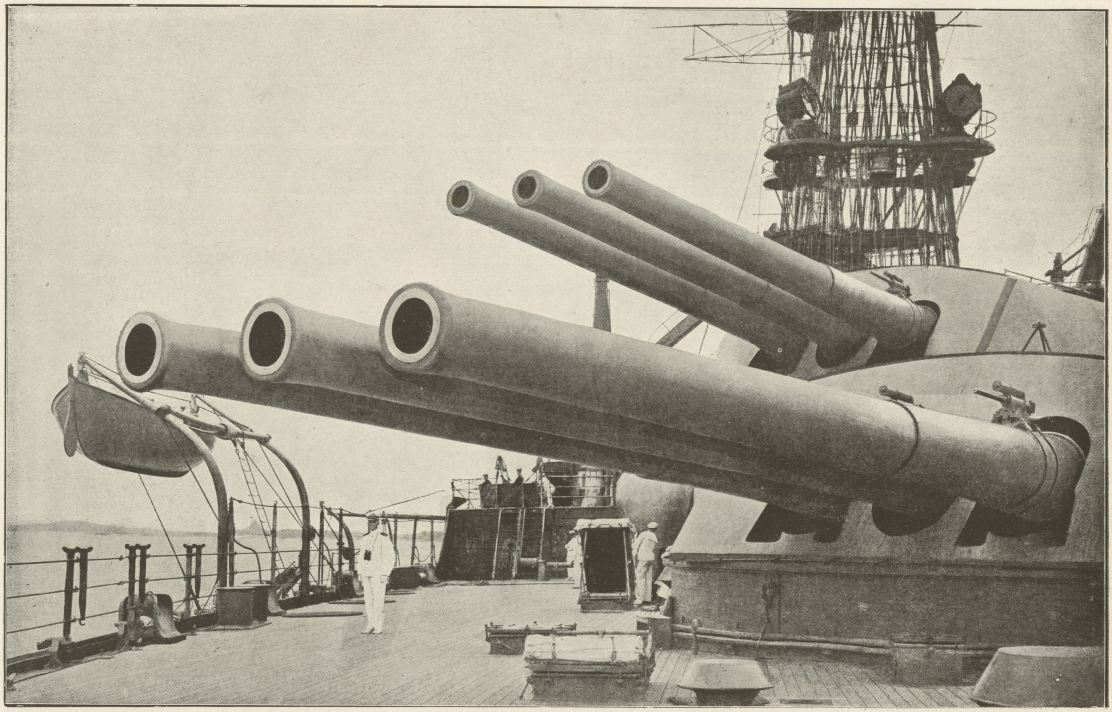

This strange landscape where shell-craters blend into a sea-like perspective bears mute testimony to the work of high explosive in this greatest of all wars.

FOUR QUEENSLAND SOLDIERS IN A COLD SPOT.

Privates Willard, Gleason, Miller (son of Mr. James Miller, Dutton Park, South Brisbane), and Austin.

Queensland soldiers going from our warm, sunny climate to the bleak winter of the northern half of the Eastern hemisphere have had a novel experience. As the photograph indicates, they have found the light clothing in vogue on this side of the world insufficient to keep out the northern winter cold, and have evidently put on as much as they can carry. In spite of the snow and cold, however, the letters received by friends in Queensland are invariably cheerful, and the writers confess that with all the ungenial weather they are enjoying themselves and are well and fit. Those who have been in France have found the winter even harder than in England, especially in the trenches; still they have been able to bear it with unexpected fortitude. It is not the snow they mind so much as the slush of the thaw.

THE THRICE RUINED CITY OF REIMS.

Reims the unfortunate has again been the target for a revengeful bombardment by the Germans in reprisal for their recent severe punishments at the hands of the French. No fewer than 8000 shells have been poured into the city daily. The illustration, from an official photograph, shows the condition of Reims in the vicinity of the famous cathedral after the first bombardment in 1915. Its present state may be better imagined than described. Inset is a view of the cathedral before the first attack.

EFFECT OF GERMAN SHELLS IN ARRAS.

Arras, like Reims, has more than once come under the guns of the Germans. Here is a view of the wreckage around the Town Hall after the 1915 bombardment. As the enemy retired before the recent advance of the British troops they again viciously shelled the city.

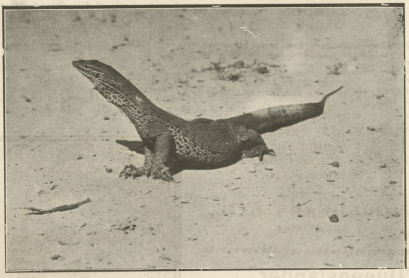

A WIRELESS DETECTIVE.

By the aid of this apparatus, the invention of an American, the position of a wireless station may be detected. Two instruments are used a little distance apart, and by intercepting wireless signals the direction is obtained from the two points. When these direction lines are produced on the map the point where they cross is the position of the station whose location it is desired to find. The military value of such an invention is considerable.—"Popular Science."

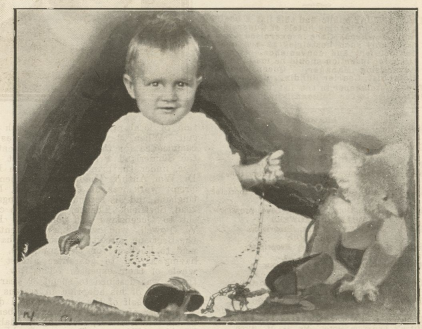

The Y.M.C.A. "Snapshots from Home" Competition.

(Snapshot by **F. J. Atkins**, Coorada).

A FREAK PINEAPPLE, WITH GIL SPROUTS REMOVED.

Freak pineapples of fan shape, consisting of numerous single fruits merged into one have been unusually common in Queensland this season. At least a dozen have been brought under our notice within the last three or four weeks. This photograph shows one forwarded to the Department of Agriculture by Mr. W. Williamson, of Caboolture. It weighed 19lb. —Department of Agriculture photo.
